Letters set in metal, then in light, and now in code

Bold · 40/41.5 pt

A specimen is a promise about a typeface: how it holds a line, how it fills a page, and how it behaves when the size drops and the text runs long.

Regular · 16/21.5 pt

Before a book was printed, its type was set into long trays called galleys, and the proofs pulled from them went to readers who marked every error in the margin. Those proofs were the first time anyone saw the text as a reader would. A specimen does the same work for a typeface. It sets the letters at every size and in every style, side by side, so their rhythm, colour and spacing can be judged. Figures in a table, italics in a quotation and bold in a heading all have to share one page without fighting.

Regular · 10/14.5 pt

Before a book was printed, its type was set into long trays called galleys, and the proofs pulled from them went to readers who marked every error in the margin. Those proofs were the first time anyone saw the text as a reader would. A specimen does the same work for a typeface. It sets the letters at every size and in every style, side by side, so their rhythm, colour and spacing can be judged. Figures in a table, italics in a quotation and bold in a heading all have to share one page without fighting.
